

Age Band

In this short blog I will show you how to create the Age from a Date of Birth field. Then to band the newly created Age field into 10 year age bands. Firstly, right click on the "Date Of Birth" field, select Create, Calculated Field.

Name this calculation "Age"

Enter the following:

```
IF [DateOfBirth]>DATEADD('year',-DATEDIFF('year',  
[DateOfBirth],TODAY()),TODAY()) THEN  
    DATEDIFF('year',[DateOfBirth],TODAY())-1  
ELSE  
    DATEDIFF('year',[DateOfBirth],TODAY())  
END
```

Click OK

This has now created a new calculated field, and will add it to the measure pane. Be sure to drag it up to the Dimension pane unless you wish to aggregate it.

Next, we are going to create another calculated field to band these ages into 10 year age bands.

Right click on the Age calculation you have just created. Select Create, Calculated Field. Enter the following:

```
IF [Age] >0 and [Age] <= 10 THEN "0-10 yrs"  
ELSEIF [Age] >10 and [Age] <=20 THEN "11-20 yrs"  
ELSEIF [Age] >20 and [Age] <=30 THEN "21-30 yrs"  
ELSEIF [Age] >30 and [Age] <=40 THEN "31-40 yrs"  
ELSEIF [Age] >40 and [Age] <=50 THEN "41-50 yrs"  
ELSEIF [Age] >50 and [Age] <=60 THEN "51-60 yrs"  
ELSEIF [Age] >60 and [Age] <=70 THEN "61-70 yrs"  
ELSEIF [Age] >70 and [Age] <=80 THEN "71-80 yrs"  
ELSEIF [Age] >80 THEN "81+"  
END
```

Name this calculated field "Age Band".

Done!
