Step 2-The first thing is to do connect to the PDF using the new connector:

Step 4-As I connected, I had a look at the data structure, but it didn't look too auspicious. I had quite a few NULLS and my headers looked all over the place

The screenshot shows the Tableau interface with a 'PDF Table' connection. The 'View Data' window displays a table with 77 rows and 12 columns. The headers are messy and inconsistent, with many NULL values. The data is organized into sections: CITY/CLASS, RES/AGR, and DISTRICT NAME. The table is titled 'PDF Table' and the view is 'Page 1 Table 1'.

Step 5-But as most of you will know, Tableau has a great Data Interpreter that can understand headers pretty well, so I switched that on and voila

The screenshot shows the Tableau interface with the 'PDF Table' connection. The 'View Data' window displays a table with 73 rows and 9 columns. The headers are clean and consistent, with no NULL values. The data is organized into sections: DISTRICT NAME, LIBR SPEC RATE, CNTY RATE, TWP RATE, LOCAL SCHOOL R..., CITY/ VILL RATE, VOC SCHOOL RATE, and TOTAL RATE. The table is titled 'Page 1 Table 1 (PDF Table)' and the view is 'Page 1 Table 1'.

HOW TO GET DATA FROM PDF IN TABLEAU

Step 6-As if by magic, my headers are now all tidied up and I can't see any NULLS either. But there is still data on **Page 2** that I need to bring in. Tableau split the data per pages in the same way it would split tabs in Excel. Time to use another Tableau 10 feature: **UNIONS**. I drag my **Table 2** underneath **Page 1** in the connection area and **UNION** the two tables together.
